

CAN-AM SPYDER AIRWAVE REAR SUSPENSION KIT

ATTENTION: SPYDER Owner's. You can now ride on the comfort of a rear air suspension kit developed by TeamFAST.COM, the industry leaders in snowmobile suspension technology. This unit seriously improves the SPYDER's ride while adding a ton of flexibility. As an owner you've likely discovered just how much effort is required to adjust the rear spring preload. With the stock system, when riders attempt to accommodate a change in payload they are left with two choices, neither of them good. Either they get the floorjack out and labor on with spring preload adjustments or they ride around with a preload setting that is either too soft or too firm. With the AIRWAVE Kit a rider simply adjusts airspring pressure with the touch of a finger either up or down. The system can be matched to every rider combination from the lightest to the heaviest single or double rider combo.

With the help of Legend Engineering and Hal and Korey from C.C. SKI-DOO in Alaska, (BRP'S 2008 National Dealer of the Year), TeamFAST developed a capable, straight forward and efficient system. One can easily understand that more comfort can be obtained riding on a column of air rather than a piece of wound up spring steel. Through the isolating capacities of air, the new system swallows up the big stuff while quietly filtering out practically all of the small through medium sized surface irregularities and bumps.

Employing an onboard compressor controlled via an effective multi-function ON-OFF / Pressure / Bleed switch, the SPYDER's rear airspring pressure can be finely matched to the loads of the rider or riders. With the onboard air compressor a flip of the remote switch lets riders adjust the rear airpring pressure to maximize the SPYDER's comfort and control when riding with or without a passenger. This totally eliminates the need to jack up the SPYDER and crawl around underneath the frame changing the rear spring preload. Hal and Korey have logged over 15,000 miles on a SPYDER with an AIRWAVE Kit. One trip alone was 11,200 miles traveling from Washington down through California, over to Texas, to North Carolina and Minnesota, then back to Alaska. This kit, like all of the rest of TeamFAST's suspension products, far surpasses that of the stock set-up for ride quality and ease of adjustment. Contact us and order yours today.
